

WFP TRUESTYLE® – JAPANESE CEDAR FENCING

REDUCES CO₂

Building with natural wood products can help reduce CO₂.

RENEWABLE

Wood is the only major building material that's renewable.

BIODEGRADABLE

Wood is recyclable and biodegradable.

WFP TRUESTYLE is the natural choice for Cedar products. Japanese Cedar (Sugi) has been used for centuries in Japan in both appearance and structural applications where both beauty and functionality are valued. WFP TRUESTYLE - Japanese Cedar Fencing has been manufactured to the highest quality standards from logs exclusively sourced from well managed Japanese forests. WFP TRUESTYLE - Japanese Cedar Fencing is kiln dried making it dimensionally stable, and its straight grain and inter-grown knot structure make it ideal for appearance fencing applications. Japanese Cedar is a long-lasting, and easy to maintain fencing solution.

4 x 4	3 1/2" x 3 1/2"	Rough/Rough	Rough	Yes	24 & 12	8'	N/A

WHY CHOOSE WFP TRUESTYLE™ JAPANESE CEDAR FENCING PRODUCTS.

WFP TRUESTYLE - Japanese Cedar (Sugi) is a renowned softwood that is grown in managed forests throughout Japan. It is a species that is ideally suited for use in fencing and other exterior structural appearance applications. Japanese Cedar is highly regarded for its technical attributes and natural beauty. The wood is reddish-pink in color, straight-grained and medium textured; it glues, stains and finishes well. WFP TRUESTYLE - Japanese Cedar Fencing is supplied in kiln-dried form and has excellent working properties, which make it ideal for fencing applications. WFP is proud to work with environmentally-focused and third-party certified Japanese forestry companies who specialize in producing Japanese Cedar products with the highest attention to detail and quality.

FINISHING & MAINTENANCE

WFP TRUESTYLE - Japanese Cedar Fencing is naturally durable and is known for holding finishes exceptionally well.

- ▶ When choosing a finish be sure that it contains Mildewcide/ Fungicide, protects against ultraviolet (UV) light and that it provides water repellency.
- ▶ Use of varnishes or other types of film forming coatings are not recommended. These coatings can crack and peel and once applied are difficult to remove.

- ▶ Prep the wood by sanding the surface with 80 grit sandpaper.
- ▶ Finish should be applied to all six sides.
- ▶ Maintain your fencing by keeping it free of dirt and debris.

These recommendations are provided by industry leaders in manufacturing, distribution and installation of Japanese Cedar Fencing. For more information on finishing and maintenance, please consult an expert.
